Organic Gardener's Compost

An organic, nutrient-rich compost to help your garden bloom

- ✓ Peat free
- ✓ Good for the environment
- ✓ Great for your garden

envva.com

An organic, nutrient-rich compost to help your garden bloom

Enva organic compost is a natural product which introduces essential organic matter to soil. It helps to improve soil structure, nutrient content of the soil, water holding properties, and increases flower and vegetable yield.

Our British Standards Institution PAS100 quality certified compost can be used as a slow-release fertiliser and soil amendment. For best results, the compost should be mixed with topsoil. Can be used as a peat replacement within your garden.

Choose peat free compost to protect peatlands and the environment

Locally sourced and produced in Scotland

We have two facilities at our South Lanarkshire site where we create quality compost. Firstly, we recycle locally sourced green and food waste in an in-vessel composting system (IVC) and secondly, we process pure green waste, both producing high grade compost certified to BSI PAS100.

Our green waste and food derived compost produced in an in-vessel composting (IVC) system has an additional maturation stage. This four-stage organic process can take up to 12 weeks and is carefully managed to ensure nutrient and organic matter retention.

Suitable for:

- ✓ Soil amendment
- ✓ Applied to soils to improve the growing characteristics of a soil
- ✓ Planting shrubs, bulbs and herbaceous plants
- ✓ Tree and shrub backfill mix
- ✓ Plant mulch
- ✓ Turf top dressing and establishment.
